**Installation instructions navi Triumph Tiger 1050**

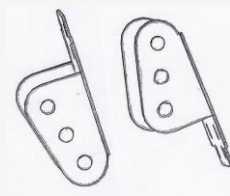

Navi with the rounded end between the fairing and a combined unit (speedometer and tachometer) and below, between transverse panel support and push trim.

Raise the upper clamp of the cover and move the holder as far down to the threaded bolts of the clamp are present at the cladding.

Support the lower support bracket on the silver rim of the combination unit.

Navi with the holder screw temporarily and use the available adjustment possibilities, so that the navigation position suits you.

Adapter plate can be rotated by 180 degrees

Then the trim panel in the clamp and remove the grease make protective strip of tape attached.

Clamp exactly in the middle (if necessary mark) stuck to the cover and tighten the two lock nuts.

Finally, adjust the tilt angle for the attached Navi and the screws of the friction hinges as desired (variable or fixed) Tighten the left and right as evenly as possible
