

Installation Manual Triumph Tiger 800/XC

Disassemble the screws from the left and right windshieldholder (M5x8mm) out of the headlight body. Those will not be necessary with our naviholder.

Place the naviholder **without the support bracket** carefully in between windshield and dashboard and mount with the enclosed VA-screws (M5x12mm) to the headlight body.

Try out in which height the navi should be mounted on the naviholder. For this, the adapter plate can be adjusted in height with the three drilled holes on the side and additionally it can be rotated by 180°.

With the enclosed support bracket the position of the navi can be slightly adjusted to the front or the back and will be finally fixed.

After you found the right height of the adapter plate, go ahead and disassemble the windshield.

Afterwards disassemble both of the M5 screws of the support bracket. Install the clamping on the curve of the forward facing windshield support and reassemble the M5-screws (as shown in the picture below).

Fix the lower clamping device of the support bracket.

Install the windshield, you might want to route your cables prior to this step.

Now fix the ideal position of the navi with the upper fixing of the support bracket.

Finally, adjust the inclination angle of the mounted navi. Tighten equally the screws of the fiction hinges according to your preference (adjustable or fixed).
